

Facilities for alternate sources of energy and energy conservation measures

Our institution has taken measures for alternate sources of energy which is environmentally friendly - green energy and pollution free using natural resources.

Solar vacuum tube is installed on the hospital building which provides hot water for 30 rooms in the special ward in hospital building. The traffic signal at the entrance of our institution is solar powered which enables smooth and safe vehicular flow.

We have sensor based automatic motor pumps placed in the collection points of the sewage water in six locations which are then directed to the main sewage treatment plant. We also have energy efficient LED bulbs all over the campus.
